

Please see recent activity for BHCC and WHPCN Charted below...

Obviously we haven't yet got the Q4 figured for this financial year but when looking at full years the was 127% increase in activity from 2021/22 to 2022/23 and based on activity so far this year the two year figure will be higher than that.

If we look at Calendar years the increase between 2021 and 2023 was 242%.

It is important to keep in mind that activity in those earlier quarters was severely impacted by the pandemic.

If we compare 2018 to 2023 we are delivering around 34% more checks now than pre-pandemic.

Hope that helps, the BHCC figures are all published [NHS Health Check - Data - OHID \(phe.org.uk\)](https://phe.org.uk) if you have any further interest
